Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

It is unclear from the specification what "a boost module" is and what does it include. Therefore, the operation of figure 1 is not well understood.

Furthermore, it appears that the original specification does not have support for amended figure 1 in which the signals from the paraboost module (110), oscillator and the oscillating drive signal feeding to the analog multiplier (590).

2. The proposed drawing correction for figure 1 has not been approved since the amended figure 1 does not have support in the original specification.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1,9 and 19 (insofar as understood) are rejected under 35 U.S.C. 102(b) as being anticipated by Hlady et al (Pat # 5,700,953).

As to claims 1,9 and 19, Hlady et al disclose method and apparatus for mapping mechanical property of a material using a scanning force microscope having an oscillating probe (16), a phase detection circuit/parachuting (22) coupled to the probe (16), a probe drive

boosting circuit/parachuting reduction circuitry (feed back loop) coupled to the phase circuit (22) for boosting a signal the probe based on the phase signal detected by the phase detection circuit (22).
